

THE 2017 LINCOLN CONTINENTAL IS NOT FLAT TOWABLE, which is a reversal from information originally provided by Lincoln officials.

Buick Envision

THE TOWING

Ford Fusion 2.7-liter EcoBoost

A guide to 2017-model-year vehicles that manufacturers have indicated can be recreationally towed behind a motorhome without significant modifications.

*The following information is intended to help motorhome owners select a vehicle that is approved by its manufacturer for flat towing. The information was gathered from automobile manufacturers and vehicle owners manuals and pertains only to 2017-model-year vehicles. The information may or may not be correct for earlier or later models. While every attempt has been made to present accurate information, continued vehicle improvements and production-line changes could alter the information and render it out-of-date. **Before purchasing any vehicle, consult its owners manual to determine whether the vehicle can be flat towed behind a motorhome and what procedures must be taken to prepare the vehicle for towing.** And check with the dealer to ascertain whether any service bulletins have been issued to update the owners manual information as it pertains to recreational towing. Towing surveys for prior years are available at www.FMCmagazine.com.*

The majority of motorhome owners take along another vehicle that they use for transportation once they set up camp. Having a second vehicle eliminates the need to unhook the motorhome when it comes time to explore the local area, and it also provides flexibility for traveling to or parking in places not accessible to motorhomes.

Since 1999, *Family Motor Coaching* has published an annual guide intended to assist members in selecting a vehicle to tow. Each guide is specific to one particular model year and focuses on the most popular method of towing — flat towing, or towing four wheels down (as opposed to using a dolly or trailer).

The list that appears on the following pages represents 2017-model-year cars, trucks, and sport-utility vehicles that manufacturers have indicated can be towed four wheels down behind a motorhome without significant modifications.

continued »

2017 LINEUP

It's important to do your homework when selecting a towed vehicle. Check the "Technical Forums" at FMCA.com to see whether there have been reports about towing particular vehicles.

BRAND/MODEL UPDATES

Two manufacturers included in previous towing guides are missing from this year's list. As previously reported in *FMC*, Subaru no longer recommends that its vehicles be flat towed behind a motorhome (*FMC* was not given any explanation regarding this change). Also, the Scion brand has been discontinued. However, the Scion iM has been integrated into the Toyota lineup as the Corolla iM; it can be flat towed when equipped with a manual transmission.

In addition, a number of vehicles from last year's chart have been discontinued, or the 2017 versions are not towable because of design changes. Discontinued models include Dodge Dart, Cadillac SRX, Lincoln MKS, Hyundai Genesis Coupe, and Hyundai Veloster Turbo Rally. Also, all 2017 Fiat 500L models are equipped with an Aisin automatic transmission, so they are not flat towable, according to company representatives. The 2017 Buick Regal GS and the 2017 Nissan Versa Note are not flat towable.

The good news is that a few vehicles have been added to the 2017 towables list. Ford has introduced a Fusion model with a 2.7-liter EcoBoost engine and automatic transmission. Buick has introduced the Envision, an automatic-transmission model with a choice of front-wheel-drive or four-wheel-drive. The 2017 Lincoln Continental also can be towed four wheels down.

Smart's Fortwo car was not included in the 2016 towing guide, because when the list was being prepared, the company said the vehicle was equipped with a new engine and transmission that made it unsuitable for recreational towing. However, company officials note that it later was determined that the Fortwo when equipped with the Twinamic dual-clutch transmission has no limitations on speed or distance when towed recreationally. Therefore, the 2017 towing guide includes the Fortwo Coupe and the Fortwo Cabrio equipped with that transmission.

BEFORE YOU BUY

Towing information may be difficult to obtain directly from the auto manufacturers, and oftentimes dealership salespeople don't understand the concept of recreational towing or have limited knowledge about which vehicles can be towed four wheels down.

That's why it's important to do your homework when it comes to selecting your next towed vehicle. Think of "The 2017 Towing Lineup" guide as the first step in your discovery process. Also, you may want to check the "Technical Forums" at FMCA.com to see whether there have been

reports about towing particular vehicles.

Following are some additional guidelines:

- Before purchasing a vehicle, make sure the dealership representative with whom you are speaking understands that you are looking to tow the vehicle and not to use it to tow a trailer.
- Next, and perhaps the most important step, is to request that you be shown a copy of the vehicle's owners manual. Once you have the manual in hand, find the section that addresses four-wheels-down towing — often under a heading such as "Recreational Towing." (Do not confuse this with "Emergency Towing," which may be possible four wheels down on a limited basis for emergency purposes only.) In this section you will find specific guidelines regarding towing procedures, necessary modifications, and safety issues pertaining to the vehicle. Many manufacturers post owners manuals online, and sometimes updated versions of the printed manuals become available. If you have a particular vehicle in mind, visit the manufacturer's website and click on the "Owners" link to see whether the manual for that vehicle is available to download.
- Once you are confident the vehicle is towable and you are comfortable with the towing setup procedures and guidelines, ask a few more questions before making the purchase. Find out from the dealer, manufacturer, or owners manual how towing will affect the vehicle's warranty. Also, ask the dealer rep whether any service bulletins have been released that relate to towing the vehicle behind a motorhome.
- If possible, have the vehicle weighed. Your motorhome has been given a gross combination weight rating (GCWR), which is the maximum allowable combined weight of the motorhome and the attached towed vehicle. The accompanying charts include approximate curb weights as supplied by the manufacturers; however, optional equipment and accessories can increase the weight of the vehicle. So, make sure that its weight will not push the combined weight above the GCWR. It's also a good idea to weigh your motorhome (see "Weighing Your RV," July 2014, page 40). Because of overloading issues, some motorhomes should not tow anything. In fact, certain motorhomes may need to have their loads lightened before being driven solo.

TOWING EQUIPMENT

Once you've selected a vehicle for towing, the next step is to purchase a tow bar and base plate. Several companies sell tow bars with varying convenience and safety features. The most important factor when selecting a towing package is to make sure it is rated to handle the weight of the towed vehicle. Have the initial installation done by qualified and experienced personnel. Once installed, check the equipment frequently and use it only in the manner for which it was designed. As with any mechanical gear, proper maintenance can increase the life of towing equipment. However, there comes a time when the equipment must be replaced to prevent a dangerous situation. Frequent inspections will alert you to the need.

When hooking up the towed vehicle, do not let yourself be distracted. Also, get in the habit of checking the towing equipment each time you stop for fuel or to take a break. Walk around the towed vehicle to make sure the tires are properly inflated and do not exhibit any unusual wear patterns. Perform these safety inspections each time you're stopped and you will decrease the chances of a potential problem while on the road.

Safety is the most important issue for motorhomers when they operate their coaches. That's why, for safety's sake, every motorhome owner who tows a vehicle four wheels down should consider using an auxiliary braking system. Many motorhome, chassis, and automobile manufacturers recommend that supplemental brakes be used on any towed vehicle.

A question that is often asked concerning supplemental brakes involves the legal ramifications of not using them. Not all jurisdictions mandate supplemental brakes on towed vehicles, but when it comes to four-wheels-down towing, safety should be paramount. Your motorhome's brakes were designed to stop the weight of the coach. Add several thousand pounds of towed vehicle weight to the equation, and the motorhome's braking system is being asked to do more than it was intended. The extra weight can reduce the effectiveness of the brakes in emergency stopping situations, as well as lead to premature — and potentially costly — wear on the motorhome's braking system.

A supplemental brake provides stopping assistance to the tandem, allowing the towed vehicle's brakes to slow the vehicle and reduce the weight inertia that's pushing forward against the rear of the motorhome. Most of us have never heard anyone say that the brakes on their motorhome stop it too quickly. Nevertheless, many of us have seen what happens when brakes don't work quickly enough.

Although this guide focuses on vehicles that can be flat towed, there is no single best way to tow. Each vehicle and each method has its advantages and disadvantages. If a vehicle you already own or wish to purchase cannot be flat towed, it may be possible to tow it on a dolly or trailer, or have adaptations made to the vehicle to make it towable.

continued »

When A Towed Vehicle Must Be Modified

Although many vehicles are not approved by their manufacturers for towing four wheels down behind a motorhome, that doesn't necessarily eliminate the possibility of such vehicles being flat towed. If you have a vehicle you enjoy driving but it is not approved for towing four wheels down, the following products from FMCA commercial-member companies may offer a solution.

THE REMCO PROFLO LUBE PUMP is used on front-wheel-drive vehicles to prevent damage to automatic transmissions. When a vehicle equipped with an automatic transmission is driven,

the transmission is lubricated by an engine-driven fluid pump. When the vehicle is towed, this pump does not operate. The Lube Pump provides a reliable lubrication system for the transmission while the vehicle is being towed. To tow the vehicle, connect the wiring cable between the motorhome and the towable. The new electronic monitor/control panel monitors the entire system while towing and alerts you if a problem arises. The panel is also where the system is switched on and off. The Lube Pump is powered by the motorhome's electrical system, so you need not worry about a dead battery in the towed vehicle. The cost of a Remco ProFlo Lube Pump ranges from \$1,175 to \$1,895.

THE SUPERIOR DRIVELINE DRIVE SHAFT COUPLING

is the answer for most rear-wheel-drive and four-wheel-drive vehicles with automatic or manual transmissions. The system discon-

nects the driveshaft at the rear U-joint and is controlled by a heavy-duty cable from the driver's seat, so it's not necessary to get under the vehicle. Simply pull the cable handle — much like the old choke cables — and disengage the steering wheel lock, and you're ready to tow. To re-engage the driveshaft, push in the cable handle using a designated procedure, and you're ready to drive. The cost of a Superior Driveline Drive Shaft Coupling ranges from \$765 to \$1,600, depending on the vehicle. Installation charges are extra.

READING THE CHART

Based on questions we've received from readers in past years, here are some clarifications regarding information that appears on the accompanying towing chart. A "Yes" in the column under the type of transmission (auto or manual) means that when equipped with that type of transmission, the vehicle is towable; "No" means it is not towable. If the model is not available with a particular transmission, "N/A" appears in the column. The "Approximate Curb Weight" and "Total Length" figures are for a vehicle's base model. "TBD" means that as of press time that piece of information was still to be determined. **Keep in mind also that although some vehicles are indicated as being towable, not all trim lines, engine configurations, etc. within that model line may be towable; always refer to the particular vehicle's owners manual to be sure.**

BUICK

MODEL	TRANSMISSION		DRIVE CONFIGURATION	SPEED/DISTANCE LIMITS	APPROX CURB WEIGHT	TOTAL LENGTH
	AUTO	MANUAL				
Enclave ¹	Yes	N/A	All-wheel drive	65 mph/None	4,922 lbs.	201.9 in.
Enclave ¹	Yes	N/A	Front-wheel drive	65 mph/None	4,724 lbs.	201.9 in.
Envision ²	Yes	N/A	All-wheel drive	None	3,929 lbs.	183.7 in.
Envision ²	Yes	N/A	Front-wheel drive	None	3,755 lbs.	183.7 in.

¹ Remove the 20-amp ECM1 fuse in the underhood bussed electrical center (UBEC). To prevent the battery from draining while the vehicle is being towed, remove the 50-amp BATT1 fuse in the UBEC.. The vehicle should be run at the beginning of each day and at each RV fuel stop for about five minutes.

² To prevent the battery from draining while the vehicle is being towed, remove fuses 29 and 32 (Body Control Module) from the instrument panel fuse block.

CADILLAC

¹ Only four-wheel-drive vehicles with a two-speed transfer case that has a Neutral and four-wheel-drive low setting can be towed four wheels down.

² The negative battery cable must be disconnected from the battery and must not touch the terminal.

³ To prevent the battery from draining while the vehicle is being towed, remove fuses F15, F23, F26, and F27 from the instrument panel fuse block.

⁴ Remove fuse 32 from the instrument panel fuse block. However, if instability (a wobble) occurs when flat towing, follow the revised flat-towing procedure in GM service bulletin 17-NA-348.

⁵ After towing, start the engine and let it idle for more than three minutes before driving the vehicle.

⁶ To prevent the battery from draining while the vehicle is being towed, remove the Discrete Logic Ignition Switch fuse from the instrument panel fuse block.

⁷ Only vehicles equipped with a 1.5-liter engine without Active Shutters RPO VRI can be towed four wheels down. To prevent the battery from draining while the vehicle is being towed, remove fuses F10 and F41 from the instrument panel fuse block.

⁸ The vehicle should be run at the beginning of each day and at each RV fuel stop for about five minutes.

⁹ The Sonic RS with automatic transmission cannot be towed four wheels down.

¹⁰ Remove the 20-amp ECM1 fuse in the underhood bussed electrical center (UBEC). To prevent the battery from draining while the vehicle is being towed, remove the 50-amp BATT1 fuse in the UBEC.

¹¹ The vehicle should be run at the beginning of each day and at each RV fuel stop for about five minutes. Reinstall the fuses to start the vehicle.

¹ After towing, let the engine idle for at least three minutes before driving the vehicle.

HOW TO MAKE A SMART TOWED-VEHICLE PURCHASE

- 1 Make sure the dealership representative with whom you are speaking understands that you are looking to tow the vehicle and not to use it to tow a trailer.
- 2 Request that the salesperson show you a copy of the owners manual for that vehicle and find the section that addresses recreational towing.
- 3 Find out from the dealer, manufacturer, or owners manual how towing will affect the vehicle's warranty.
- 4 Ask the dealer rep whether any service bulletins have been released that relate to towing the vehicle behind a motorhome.
- 5 Finally, if possible, have the vehicle weighed. Your motorhome has been given a gross combination weight rating (GCWR), which is the maximum allowable combined weight of the motorhome and the attached towed vehicle.
